

Mark Weiser's Vision of Future Computing (BEDROOM)

- ❖ Technology would improve comfort, convenience, and individuality in a setting where bedrooms are commonplace. Which is consistent with Mark Weiser's prediction for the future of computers, in which technology is assimilated into daily life without interruption. A typical bedroom setting is described as follows:
- ✓ **The purpose of a computer is to help you do something else.**
 - **Automated air condition:** Using automated air condition, it will help us to keep our room temperature moderated from the outside. So that we will not feel Spartan. We need not to get worry for it as it will be done by sensor.
- ✓ **The best computer is a quit invisible servant.**
 - **Makeup brush cleaner :** It's a type of cleaner that is used to clean makeup brush and sponges. So, that there is less chance of getting into any skin infection.

Mark Weiser's Vision of Future Computing (BEDROOM)

- ✓ **The more you can do by intuition the smarter you are; the computer should extend your unconscious.**
- **Automated medicine box:** This will be much more useful for the whole people especially old people. As it is hard for them to keep everything in their mind. Therefore, it will remind them to take their medicine in time.
- ✓ **Technology should create calm.**
- **Automated air purifier:** it is effectively working well in term of reduction of dust particle and good for the allergy symptoms patient. Moreover, it will not inform or demand your focus.
